

DFTU Member meeting
Cityringen - Tunnelling at Kongens Nytorv
27th April 2017 at 16.00 – 18.00 hrs
Metroselskabet, Metrovej 5, 2300 Cph S

The future Kongens Nytorv station being built as part of the Cityringen project provides an interchange between Cityringen and the existing Metro line. Crossing just above the existing Metro tunnels with only marginal clearance to the foundations of Magasin du Nord presented one of the biggest challenges for the Cityringen tunnelling.

The presentation will describe both the decision process and planning prior to award of the Cityringen contract as well as the design and execution of the preparatory and tunnelling works that were completed in late summer 2016.

Program:

1. Description of the decision process for the tunnelling concept at the future Kongens Nytorv station providing connection between the existing Metro line with Cityringen/ Simon Taylor, Head of Tunnelling, Metroselskabet
2. Presentation of preparatory works and the tunnelling works for Cityringen from the future Kongens Nytorv station crossing the existing Metro/Valerio Violo, Project Director, Seli Denmark

Registration deadline on 25th April 2017 to brm@m.dk or dftu@dftu.dk

On behalf of the DFTU Board

Søren Degn Eskesen
